

## PRESS RELEASE - FOR IMMEDIATE RELEASE - August 13, 2017

**August 12, 2107. Lumin's S1**, the company's flagship model, has been awarded The Absolute Sound's prestigious 2017 Golden Ear Award. The S1 sets an industry standard for streaming and rendering. It facilitates operation with all major streaming services including Internet radio, plus file formats in PCM/DXD and DSD128. Up-sampling and PCM to DSD conversion is also possible through the Award winning Lumin control application. 4 ESS 32bit Sabre DACs are configured to provide 16 mono DACs per channel, coupled to dual mono Lundahl output stage transformers. Custom FPGA and memory buffers are included and firmware/software, plus general feature updates are performed over the air. Lumin's over the air update capability allows consumers to enjoy the S1 with new and evolving features, without having to purchase a new unit. The S1 also includes SPDIF and HDMI outputs and uses an enhanced, external, dual-mono AC to DC linear mode power supply. Optional 2TB external hard disc drives are also available. All "noise producing" components engineered to be external to the chassis, eliminating noise and interference. Available in anodized black or brushed aluminum silver. Manufactured by commercial broadcast engineering company Pixel Magic Systems, Ltd, the S1 retails for \$9800. The S1 home page is located at: <http://www.luminmusic.com/lumin-s1.html> Available through authorized dealers only.

**March 1. 2017. Lumin's A1**, the company's mid-line model, has been awarded The **Absolute Sound's 2017 Editor's Choice Award**. **Previously the A1 was awarded Product of the Year** by The Absolute in 2014/2015. The A1 facilitates operation with all major streaming services including Internet radio, plus PCM/DXD file and DSD playback. Up-sampling and PCM to DSD conversion is also possible through the Award winning Lumin application. Creating an unmatched analog flavor, dual mono Wolfson DACs are coupled to dual mono Lundahl output stage transformers. Custom FPGA and memory buffers are included and firmware/software and feature updates are performed over the air. Lumin's over the air update capability, allows consumers to enjoy the A1 with new and evolving features, without having to update the component. The A1 also includes SPDIF and HDMI output and uses an enhanced, external, dual-mono AC to DC linear mode power supply. Optional 2TB external hard disc drives are also available. Available in anodized black or brushed aluminum silver. Manufactured by commercial broadcast engineering company Pixel Magic Systems, Ltd, the A1 retails for \$6500. The A1 home page is located at: <http://www.luminmusic.com/lumin-a1.html> Available through authorized dealers only.

Note: Pricing and specifications are subject to change without notice.
