New product demonstrations at AXPONA 2019: Room 1221

Importer-distributor expands product offerings.

Schaumburg, Illinois (April 10, 2019) – Source Systems Ltd, importer for Lumin Music Systems, fi data and M2Tech, today introduced new streamers, DACs, amplifiers, phono-stages and power supplies. Live demos during the show, may be heard in room 1221.

New models from **Lumin Music Systems** include the T2 streamer/renderer/DAC with DAC bypass, an expanded Lumin iOS/Android application, model X1 Black (Optical networking), and The Lumin Amplifier. For more information and high res. photos please visit: www.luminmusic.com/

fi data of Japan by I-O. Data Devices is showing a new version of the fi data music app, and an updated version of their server model HFAS1-XS20U. fi data remains the only custom-built “X Cluster pro grade SSD” server/renderer/ripper/tagger in the market. New electronics and isolation platforms were created for each stage of build and operation. For more information and high res. photos please visit: <https://www.iodata.jp/fidata/en/>

M2Tech of Italy completes its desktop series of low profile, high performance components. New for AXPONA is the VDG-3, an ultra-low noise external power supply for M2Tech components ranging from 9v to 15v. Shown for the first time is the P1, providing dual phono inputs and dual line inputs with remote control source selection. Rounding out the line is a 2 channel, bridgeable, dual mono desktop amplifier, model N1, and the Young MQA MK3, DAC-preamp. The MQA MK3 also provides analog input, DXD and DSD526 decoding. The new Joplin MK3 A/D-D/A converter will soon join the line succeeding the Joplin MK2. For more information and high res. photos please visit: <http://lnx.m2tech.biz>
